

Advanced Traffic (xx-xxx)
Class Project Part 2

Part 2: Object-Oriented Programming (OOP) for Traffic Elements

Goal:

1. OOP
2. Defined the network objects
3. Defined the agents and all the abilities they can have

Tasks

1. Implement classes. (for example **Lane** and **Intersection** classes.)
2. Each class should provide some functionality like traffic light and has the possibility to store data.
3. Vehicles should move along lanes, change lanes, and interact with intersections.

Outputs

1. One or some python files with special abilities as explained above.
2. Brief report about the code(documentation in all files with a `read_me.md` file.)
3. Presenting the code for me and answer the questions.

Time

Week 1-2

Grade Weight

5%(In this part you can not check if your code is good or not. So the most grade of this part will be aggregated with other parts as follows. The current grade is only for the structure you make for your classes and how wide you design them for future.)
