

## Advanced Traffic (20–551) Class Project Part 4

---

### Part 4: Vehicles & Store Data

#### Goal:

1. Apply object-oriented programming (OOP) principles.
2. Modify previous files to integrate traffic lights and vehicle movements.

#### Tasks

1. Implement vehicle and stats class.
2. Ensure vehicles obey traffic lights at intersections.

#### Output

1. Updated Python files integrating traffic-light control.
2. A brief report with inline documentation in all files, plus a README.md.
3. Present the code and be prepared to answer questions.

#### Time

1 week (1404-09-11)

#### Grade Weight

5% (This part cannot fully verify correctness. Most of the credit will be combined with other parts. The current grade focuses on the structure of your classes and how extensible they are for future work.)
